Art Unit: 1615

Claims 1-9 are pending in this application.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,228,367. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims overlap. The claims of the instant application are generic to the patented claims of '367 which are species.

Instant claim 1 differs from claim 1 in the patent in that the instant application is claiming a food supplement formulation which consists essentially of flaxseed oil and lipase, and the patent ('367) is claiming a food supplement formulation consisting essentially of flaxseed oil, borage seed oil, fish oil and lipase.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Abbruzzese et al. (U.S. Patent No. 6,077,828) teaches methods and nutritional compositions comprising dietary oils.

Lamsaet al. (USP 5,747,434) teaches a process for making a synthetic ester from an oil by means of lipase enzymes
